Overview

Hello! I am a DevOps Engineer with hands-on experience managing infrastructure and CI/CD pipelines for a microservice architecture both on-prem and in the cloud. I love digging deep into systems and learning how they work, from the application layer down to the underlying infrastructure, in order to keep the gears turning smoothly. Outside of work, I enjoy photography, mountain biking, working on cars, and tinkering with my home lab where I can experiment, break things, and figure out how to fix them.

Experience

Charter Communications

DevOps Engineer I July 2025 - Present

- Developed CI/CD pipelines for building, testing, and deploying custom Go services to Kubernetes environments running in AWS, as well as deploying Terraform managed infrastructure.
- Developed and maintained Terraform IaC for SSM automation, IAM permission management, RDS database infrastructure, monitoring integrations, and other AWS resources.
- Manage Kubernetes application deployments using Helm, including configuration, releases, and troubleshooting across three environments.
- Troubleshoot application, infrastructure, and data pipeline issues across the stack, supporting both legacy datacenter infrastructure and AWS environments during migration activities, outage events, and as part of an on-call rotation.
- Implement and maintain monitoring and observability integrations to provide visibility into application health, infrastructure performance, and production incidents.
- Collaborate with external teams for networking/firewall issues, integrate SSO solutions, support security audits, and onboarding data consumers.

Associate System Administrator - Internship May 2025 - July 2025

- Provided Tier 2 application support and troubleshooting for application and service-level issues.
- Created Datadog dashboards, custom metrics, and observability integrations to improve system visibility.
- Automated repetitive administrative tasks using scripting and Ansible configuration management.

Education

University of North Carolina at Charlotte
Bachelor of Arts in Computer Science; Information Technology Concentration
Minor in Security and Intelligence Studies
Graduated December 2025 | GPA 3.63

Technical Skills

Linux Administration	Ansible	GitLab CI/CD	Terraform
Networking Fundamentals	Bash & Python Scripting	Kubernetes / Docker	Datadog Monitoring
		AWS Infrastructure	Nix / NixOS
